

Model Partial

Name :- T. Jaya Krishna

Reg No :- 192572036

Course :- CSA1607
Code

Course :- Data Warehouse and
Name

1. Suppose that the data for analysis includes the attribute age. The age values for the data tuples are (in increasing order) 13, 15, 16, 16, 19, 20, 20, 21, 22, 22, 25, 25, 25, 25, 30, 33, 33, 35, 35, 35, 35, 36, 40, 45, 46, 52, 70.

(a) What is the mean of the data? What is the median?

(b) What is the mode of the data? Comment on the data's modality (i.e., bimodal, trimodal, etc.).

(c) What is the midrange of the data?

(d) Can you find (roughly) the first quartile (Q1) and the third quartile (Q3) of the data?

2. The following values are the number of pencils available in the different boxes. Create a vector and find out the mean, median and mode values of set of pencils in the given data.

Box1 Box2 Box3 Box4 Box5 Box6 Box7 Box8 Box9 Box10
9 25 23 12 11 6 7 8 9 10

Fitness Tracker Data

UserID	Steps Taken	Calories Burned	Workout (Cardio/Strength)	Active Hours
3701	5000	200	Cardio	2
3702	8000	400	Strength	3
3703	3000	150	Cardio	1
3704	10000	500	Cardio	4
3705	6000	300	Strength	2.5

Classify workout types using steps taken and calories burned with a decision tree. Interpret the rules.

4. Prediction of Categorical Data using Decision Tree Algorithm through WEKA using any datasets. a) Tree b) Preprocess

c) Logistic

$$\text{Mean} = \frac{\text{Sum of all observation}}{\text{No. of all observation}}$$

Printf ("%d", mean);

// Mode:

int mode;

mode = frequently repeated number

for (i=0; i<=n; i++);

Printf ("%d", mode);

3

// Median:

int median; n;

n = Middle of the number

Printf ("%d", n);

Output:-

Mean =

Median = 25

Mode = 25, 35

$$\text{Mid Range} = \frac{25}{2} = 12.5$$

21.5 (n/2)

Result: The R-Program Code was executed successfully.

Q2) Aim: To Analysis the no. of Pencils Available in the different boxes Create a vector find the Mean, Median, Mode value of set of Pencil in Given Data

Procedure:

1. Using the R Program to Create a vector to Analysis the no. of Pencils in the different boxes
2. First write the code in the R-tool
3. After the set the Pencil in the Given Data
4. There are 10 Boxes are there to Analysis and
5. Will run the Program using the R-tool and
6. Result and output will appeared noted the Boxes.

// Mean:-

Code:- int, n, Mean;

```
Name <- (Box1, Box2, Box3, Box4, Box5, ... - - -)
Set of Pencil (9, 25, 23, 12, 11, 6, 7, 8, ... - - -)
for (i=0; i<=n; i+1):      Mean = n/m;
Printf (" %d", Mean);
```

// Median

```
int Median, n;
Name <- (Box1, Box2, Box3, Box4, Box5, Box6, ... - - -)
Set of Pencil (9, 25, 23, 12, 11, 6, 7, 8)
for (i=0; i<=n; i+1);
Printf (" %d", Median);
```

// Mode

```
int Mode, n;
Name (Box1, Box2, Box3, Box4, Box5, Box6, ... - - -)
```

Set of Pencil (9, 25, 23, 12, 11, 6, 7, 8)

Output:-

```
for (i=0; i<=n; i+1):
Mean = 121      Printf (" %d", Mode);
```

Median = $\frac{17}{2} = 8.5$

Mode = 9

AIM: To Analysis the Witness Tracker Data from
- Given table and Calories burned With a Decision
tree using Weka tool

Procedure:

1. Installed the Weka Program.
2. And Collect the Dataset from the iris Data sets
3. And using the Weka tool and Calories burned With a Decision tree using Weka tool.
4. Received the Result.
5. Output will be appeared.

Output:

Correctly classified Instances	9	90%
Incorrectly classified Instances	1	10%
Kappa statistic	0.87	
Mean absolute error	0.09	
Root mean squared error	0.18	
Relative absolute error	18%	

Root relative squared error 36%

Total Number of Instances 10

Decision tree:

Result:

To Analysis the using the Weka tool to create the Calories burned Program was executed successfully.

4) Aim: To Prediction of the Categorical Data using the
sol: Decision tree algorithm through weka using any Data
 sets a) tree b) PreProcess c) logistic

Procedure:

1. Installed the weka tool to the Laptop.
2. And then open the tool and collect the Data sets from
 internet from the Kaggle.
3. using the weka tool data using Decision tree Algorithm
 through weka. a) tree b) PreProcess c) logistic
4. Received the Result
5. Output will be appeared.

Output:

TP Rate	FP Rate	Precision	Recall	FMeasure	MCC
0.778	0.400	0.778	0.778	0.378	0.378
0.600	0.222	0.600	0.600	0.378	0.378
0.710	0.337	0.714	0.714	0.378	0.378

ROC Area	Class
0.817	Yes
0.655	No
0.759	

Result:

To Analysis the Categorical Data using Decision tree
 Algorithm through weka Program executed successfully.
